

Attorney's Docket No.: 07977-226002

In the claims:

Please amend the claims as follows:

2. (Amended) A method for manufacturing a semiconductor device comprising:

forming a semiconductor film comprising silicon over a substrate; and

irradiating said semiconductor film by scanning with at least first and second pairs of linear infrared lights in a predetermined direction, peak of a temperature of the second pair of linear infrared lights are higher than peak of a temperature of the first pair of linear infrared lights,

wherein upper lights of the first and second pairs of said linear infrared lights are located over said substrate and lower lights of the first and second pairs of said linear infrared lights are located at a backside of said substrate.

8. (Amended) A method for manufacturing semiconductor device comprising:

forming a semiconductor film over a substrate; and  
irradiating said semiconductor film comprising silicon by scanning with at least two main linear infrared lights and two

Attorney's Docket No.: 07977-226002

film,

wherein an upper light of the auxiliary linear infrared lights and an upper light of the main linear infrared lights are located over said semiconductor film and a lower light of the auxiliary linear infrared lights and a lower light of the main linear infrared lights are located at an underside of said semiconductor film.

14. (Amended) A method for manufacturing a semiconductor device comprising:

forming a semiconductor film comprising silicon over a substrate; and

irradiating said semiconductor film with at least a pair of main linear infrared lights and a pair of auxiliary linear infrared lights while moving said substrate in a direction perpendicular to the linear infrared lights,

wherein an upper light of the auxiliary linear infrared lights and an upper light of the main linear infrared lights is located over said substrate and a lower light of the auxiliary linear infrared lights and a lower light of the main linear infrared lights is located at a backside of said substrate, and

wherein said semiconductor film is irradiated with said

Attorney's Docket No.:07977-226002

20. (Amended) A method for manufacturing semiconductor device comprising:

forming an amorphous semiconductor film comprising silicon over a substrate; and

crystallizing the semiconductor film by scanning with at least first and second upper linear infrared lights and first and second lower linear infrared lights in a predetermined direction, peak of a temperature of the second upper and lower linear infrared lights are higher than peak of a temperature of the first upper and lower linear infrared lights, wherein said first and second upper linear infrared lights are located over said substrate and said first and second lower linear infrared lights are located wherein at a backside of said substrate, and wherein said predetermined direction is coincident with a direction of crystal growth in the semiconductor film.

29. (Amended) A method for manufacturing semiconductor device comprising:

forming an amorphous semiconductor film comprising silicon over a substrate; and

crystallizing the semiconductor film by scanning the semiconductor film with at least a pair of first upper and first

Attorney's Docket No.: 07977-226002

form and move a temperature gradient the semiconductor film,  
wherein said upper I near infrared light are located over  
said semiconductor film and said at least two lower linear  
infrared light are located at an underside of said semiconductor  
film, and

wherein said direction is coincident with a direction of  
crystal growth to be proceeded in the semiconductor film.

30. (Amended) A method according to claim 29, wherein peak  
of a temperature of the first upper and first lower linear  
infrared lights are lower than peak of a temperature of second  
upper and second lower linear infrared lights.

36. (Amended) A method for manufacturing a semiconductor  
device comprising:

forming an amorphous semiconductor film comprising silicon  
over a substrate; and

crystallizing said semiconductor film by irradiating said  
semiconductor film with at least a pair of main linear infrared  
lights and a pair of auxiliary linear infrared lights while  
moving said substrate in a perpendicular to the linear infrared  
lights, peak of a temperature of the pair of main linear

Attorney's Docket No.: 07977-226002

wherein one of said main linear infrared lights and one of the auxiliary linear infrared lights are located over said substrate and the other one of said main linear infrared lights and the other one of the auxiliary linear infrared lights are located at a backside of said substrate,

wherein an irradiating direction is coincident with a direction of crystal growth to be proceeded in the semiconductor film, and

wherein said semiconductor film is irradiated with said auxiliary lights prior to said main linear infrared lights.

41. (Amended) A method for manufacturing a semiconductor device comprising:

forming an amorphous semiconductor film comprising silicon over a substrate; and

crystallizing said semiconductor film by scanning with first and second pairs of linear infrared lights in a direction perpendicular to a longitudinal direction of the linear infrared lights, each of said first and second pairs of linear infrared lights consisting of an upper light and a lower light,

wherein upper lights of the first and second pairs of linear infrared lights are located over said substrate and lower

Attorney's Docket No.: 07977-226002

wherein said semiconductor film is irradiated with the first upper and lower lights prior to second upper and lower linear infrared lights.
